

Greetings!

Mothballs and cayenne pepper. That is my deterrent of choice right now. Not for COVID but for the chipmunks who insist on burrowing in my garden—who then my dog goes after ultimately making an even bigger mess.

In light of the ongoing COVID 19 situation and the current unrest in the world, the US and in our own cities, it puts my previous concerns in the proper perspective.

Our world at CuraMedix has changed and obviously yours has too. With that being said, our team is still here for you to support you, your interest in incorporating shock wave into your continuum of care, and helping you help your patients get better.

This month's newsletter features a variety of ways to learn more about EPAT/ESWT. Definitely check out the new webinars on shock wave research and how the technology is being used to advance patient care worldwide. These are part of a weekly webinar series we are sponsoring. We encourage you to join us and attend.

To make sure you don't miss out, watch your email for an invite or <u>visit</u> our site to register.

In this issue, we're also covering exciting research findings about using EPAT to treat running injuries. And, if that's not enough and you're hungry for more, there's <u>a new white paper</u> on what makes shock wave so successful in medical applications.

Have questions or want to connect? Please reach out at any time.

All the best,

Elise B. Hamann Director of Sales and Marketing Phone: <u>401-333-6500</u> Email: <u>elise.hamann@curamedix.com</u> <u>https://www.curamedix.com</u>
